OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database. Information is dispatched weekly on 150 mm × 100 mm (6″ × 4″) cards.

TOPICS

This is an SDI service based on standard profiles. There are over 90 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

Tapes containing all the information included in the INSPEC publications are issued twice monthly. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

JAPAN UPDATE

Six high-technology subjects are covered by Japan Update Services. Abstracts are provided for articles selected from over 250 Japanese journals and despatched weekly on conveniently-sized cards. This inexpensive service is designed to help engineers stay abreast of technological developments reported in the Japanese literature.

Japan Update

A new weekly information service from INSPEC alerts you to articles in six high-technology areas from over 240 Japanese Journals.

Japan Update is derived each week from the latest input to the INSPEC Database, the world's foremost informatio service in electronics, computing and physics.

Receive full bibliographical details and abstracts from an or all of these subject areas:

ELECTRONIC DEVICES AND MATERIALS

including

integrated circuits and semiconductor devices; magnetic and superconducting devices; lasers, light emitting diodes and other optoelectronic devices; electro-optical devices; solid-state material processing and preparation.

TELECOMMUNICATIONS

including

radiowave propagation; satellite communication systems; telephony; mobile communications; radar; radio navigation; radio and television broadcasting.

INSTRUMENTATION

including

automatic test equipment; digital instrumentation; display systems; measurement of specific variables; applications in nuclear science, medical physics, biomedical engineering, aerospace and earth sciences.

CONTROL TECHNOLOGY

including

robotics; automatic control systems; flexible manufacturing systems; control of specific variables; industrial applications of control systems.

COMPUTER HARDWARE AND SOFTWARE

including

mainframe computers; minicomputers; microcomputers; printers, storage devices and other peripheral equipment; system architecture; operating systems; other software techniques.

COMPUTER APPLICATIONS

including

office automation; information storage and retrieval systems; electronic mail; personal computing; applications in engineering and natural sciences.
